## SUMMARY

---

Certified Scrum Product Owner (CSPO) with 8 years leading AI and data product strategy, backlog ownership, and cross-functional squad delivery. Personally defined acceptance criteria and prioritised the product roadmap for a Palantir Foundry AI platform, reducing operations decision time from 12 days to 1 hour, cutting manual reporting effort by 20 hours per cycle (5 headcount to 1), and preventing production losses through early-warning product features. Expanded platform adoption to new regions, directly increasing monetisable business value. Deep technical fluency in GenAI, LLM integration, RAG, and model evaluation, grounded in customer discovery and responsible AI, with strong stakeholder alignment and go-to-market execution. Open to Senior AI Product Manager and AI Product Owner roles globally (remote and onsite).

## SKILLS

---

**Palantir Foundry:** AIP (AI Platform), Pipeline Builder, Ontology Manager, Workshop, Code Repository (Python), Contour, Quiver, Fusion Sheets, Slate, Object Explorer, Issues, Database

**Data Science and ML:** SQL, Python (Pandas, NumPy, Matplotlib, PyTorch), PySpark, Statistics, Statistical Modelling, Hypothesis Testing, Data Analysis, Data Mining, Programming, Machine Learning, Feature Engineering, Model Evaluation (Precision, Recall, F1 Score), Model Monitoring, Model Drift Detection, A/B Testing, Experimentation Design, Predictive Modelling, APEX Forecasting, Decline Curve Analysis (DCA)

**GenAI and LLM:** Large Language Models (LLMs), LLM Integration, LLM Product Strategy, Retrieval-Augmented Generation (RAG) Pipelines, Vector Databases, Embeddings, Semantic Search, Prompt Engineering, Generative AI Pipelines, MLflow, Agentic AI Frameworks, Responsible AI, Ethical AI Frameworks, LLM Guardrails, AI Safety, Data Privacy, Hallucination Mitigation

**Data Engineering:** Extract, Transform, Load (ETL) Pipelines, Analytics Tools (Power BI, Tableau, Contour, Quiver), Data Modelling, Data Wrangling, Data Quality, Data Governance, Data Migration, Data Cleaning and Validation, Data Segmentation, CI/CD (Continuous Integration/Continuous Delivery), KPI Definition, Data Storytelling

**Product Ownership:** Certified Scrum Product Owner (CSPO), Product Strategy, Product Vision, Product Backlog Management, Backlog Grooming, MoSCoW Prioritisation, Sprint Planning, Sprint Review, Sprint Retrospective, Definition of Done, User Story Mapping, Release Planning, MVP Definition, Product Roadmap, OKRs, Metrics-Driven Delivery, Go-to-Market Strategy, Growth Marketing, Market Sizing (TAM Estimation), Funnel Analytics, Competitive Analysis, Product Lifecycle Management, Voice of Customer, Customer Discovery, Jobs to Be Done (JTBD), Business Impact Attribution, User Adoption Metrics, A/B Testing, Cross-functional Squad Leadership

**Business Analysis:** BRD, PRD, User Stories, Acceptance Criteria, User Story Mapping, Business Process Improvement, Workflow Automation, Change Management, Feature Prioritisation, UAT, Requirements Gathering, Voice of Customer

**Platforms and Tools:** Azure DevOps (Product Backlog and Sprint Management), Jira, Confluence, PEGA CRM, Trello, SDLC (Software Development Life Cycle), Agile, Scrum, Kanban, SAFe (Scaled Agile Framework)

**Leadership:** Product Strategy, Stakeholder Alignment, Stakeholder Management, Client Presentations, Verbal Communication, End-to-End Delivery, Cross-functional Collaboration, Design Thinking, Ethical AI, LLM Integration, Intelligent Automation, Driving Operational Excellence

## WORK EXPERIENCE

---

**Data Analytics and IoT Lead**, Hexaware Technologies

Apr 2026 - Present

- Own and manage the product backlog for an enterprise AI and analytics platform, personally defining acceptance criteria and prioritising features using data-driven frameworks, reducing operations decision time from 12 days to 1 hour.
- Facilitate sprint planning, sprint review, and retrospective ceremonies for a cross-functional squad, translating stakeholder business requirements into clearly defined user stories, acceptance criteria, and Definition of Done.

- Define product vision and maintain the product roadmap, balancing short-term sprint goals with long-term strategic objectives across 2+ client technology stacks including Palantir Foundry.
- Conduct stakeholder interviews grounded in customer discovery and Jobs to Be Done (JTBD) principles, translating complex business challenges into actionable AI product features that drive MVP definition and go-to-market readiness.
- Track and improve sprint velocity using Azure DevOps dashboards, managing backlog grooming and release planning that reduced manual reporting effort by 20 hours per cycle - shrinking a 5-person workflow to 1.

#### **Senior Data Analyst**, Infosys Limited

Jan 2021 - Mar 2026

- Owned the product backlog and led sprint planning on Azure DevOps for a Palantir Foundry AI platform, personally defining acceptance criteria and prioritising features across 6 regions and 30+ assets - preventing an estimated \$10,000 in production losses through early-warning capabilities and expanding platform adoption to new regions, directly increasing monetisable business value.
- Personally built, tuned, and monitored forecasting models in Palantir Foundry Code Repository (Python) for performance drift over time, achieving a 15% improvement in accuracy across 4 well types through advanced feature engineering and ML-driven pattern recognition on 1.1M+ rows of daily production data.
- Processed and analysed a dataset spanning 230 files and 85 columns of daily upstream Oil and Gas production data using Python (Pandas, NumPy), maintaining data quality and governance standards that supported operational reporting and decision-making.
- Constructed Foundry Transforms and Ontology objects to onboard 6 regional pipelines - each covering 4 to 5 assets - consolidating 30+ data sources into a single unified output pipeline for downstream analytics.
- Defined and shipped a Workshop dashboard product that replaced manual spreadsheet reporting, delivering real-time well production vs forecast visibility for operations teams and reducing reporting cycle time by 1 full working day.
- Built a Palantir Foundry module to predict carbon emission reductions from eco-friendly extraction practices, improving operational efficiency by 10% and supporting client sustainability reporting.
- Engineered scalable Extract, Transform, Load (ETL) data pipelines consolidating 30+ regional asset data sources into unified visualisation reports, ensuring reliable daily data flow across all 6 production regions.
- Investigated Generative AI (GenAI) and Retrieval-Augmented Generation (RAG) through Palantir AIP and structured self-study, building applied knowledge across 3 key areas: LLM-based pipelines, prompt engineering, and agentic AI frameworks for enterprise analytics.

#### **Senior System Engineer**, Infosys Limited

Sep 2017 - Dec 2020

- Defined user stories, acceptance criteria, and product requirements for a PEGA CRM-based campaign automation product for a telecommunications client - including market sizing to estimate the addressable customer base - orchestrating a team of 3 to deliver across email, SMS, and app-push channels and improving targeting accuracy by 10%.
- Designed and executed A/B testing and hypothesis testing frameworks with multiple campaign variants, tracking the full funnel from offer delivery through open, click, and conversion stages, achieving a 60% uplift in conversion rates through data-driven experimentation and iterative campaign optimisation.
- Developed SQL-based predictive models to surface market trends and customer behaviour insights, resulting in a 40% improvement in campaign effectiveness and measurable uplift in audience engagement across email, SMS, and app-push channels.
- Architected and deployed SQL-based data pipelines in collaboration with data engineers, reducing processing time by 30% and ensuring reliable reporting data flow across business units.
- Executed end-to-end User Acceptance Testing (UAT) cycles and Business Requirements Document (BRD) gathering, delivering workflow automation solutions that reduced manual process overhead by streamlining 3 or more recurring business processes.
- Partnered with client support teams over 3 years to resolve 10 to 15 tickets per month via Jira and Confluence, gathering requirements and delivering technical solutions that improved issue resolution speed and sustained client satisfaction.

**CERTIFICATIONS**

---

Certified Scrum Product Owner (CSPO) -- Scrum Alliance -- 2026  
NVIDIA-Certified Associate: Accelerated Data Science -- NVIDIA -- 2025  
Databricks Certified Generative AI Engineer Associate -- Databricks -- 2025  
Generative AI with Large Language Models -- Coursera / DeepLearning.AI -- Oct 2023  
Generative AI and Prompt Engineering (ChatGPT, DALL-E) -- Coursera -- Oct 2023  
IELTS General Training - Band 7.5 (C1) -- British Council -- Feb 2025

**AWARDS**

---

Recognition for Exceptional Effort -- M1 B2C Transformation Program, Infosys Limited
